

# Bittium Tough Mobile

Quick start guide

# Bittium

# Device at-a-glance

- 1 Power key and status indicator LED
- 2 Earpiece and microphone
- 3 Headset and protective cover
- 4 Front Camera
- 5 Back Camera
- 6 Loudspeakers
- 7 Flash LED
- 8 Volume Key
- 9 PTT/Multipurpose Key
- 10 Battery Cover
- 11 Battery charging connectors
- 12 USB 3.0 port and protective cover

The ambient light sensor and proximity sensor are located next to the camera on the front of the Tough Mobile. The micro USB 3.0 port is located on the bottom of the Tough Mobile.

**The Tough Mobile is water and dust resistant (IP67). In order to maintain the water and dust resistance the battery cover, the USB connector cover and the headset cover must be properly closed.**

**Submerging the Tough Mobile in water will degrade touch screen responsiveness and audio quality. The restoration of touch screen responsiveness and normal audio quality will require all water to be wiped off the touch screen and completely dried from the ear-piece and loudspeaker openings.**

# Box contents

The Tough Mobile sales package contains the following items:

- Battery
- Charger, with US, UK and EU adapters
- Micro USB 3.0 cable
- 3.5mm Headset
- Quick Start Guide

Box contents and the appearance of the accessories may vary.

**Verify that the Tough Mobile is turned OFF before removing the battery and inserting SIM card(s).**

## Getting started

To start using the Tough Mobile first remove the battery cover and insert SIM card(s). Insert a micro SD card into a micro SD card slot. SIM card 1 is inserted into SIM card slot 1 and the battery is inserted. Replace the battery cover and push the power key to power the Tough Mobile.

Prior to using the Tough Mobile the battery should be fully charged using the charger and USB3.0 cable provided inside of the sales package.

**The Back Cover of the Tough Mobile is intentionally tight to meet IP67 requirements. Apply enough force via the small notch in the Back Cover to pry the cover open.**

In order to maintain the water and dust resistance, the battery cover must be properly closed.

- 1 Align the upper edge of the back cover notches in place.
- 2 Snap lower edge notches in place
- 3 Squeeze the back cover in place
- 4 Verify that all notches have closed on all sides

Once the Tough Mobile has powered up, follow the on-screen instructions to set up the device using the Security Wizard.

## Security wizard

The Tough Mobile is equipped with a Security Wizard that is launched during the initial power up of the device. The Security Wizard is used to set up a number of different device settings. Follow the on-screen instructions by first setting a screen lock code.

The number of set-up steps may vary depending on the security features of the device.

# Lock screen

Turning off the display locks the Tough Mobile. The Tough Mobile also locks after a period of inactivity. Turn the display off by pressing the power key once. The display can be turned on by pressing the power key or multiuse key.

To open the screen lock and to access the home screen, follow the steps outlined below:

1. Swipe the lock upwards.
2. Enter screen lock code.
3. Press the check mark.

# Emergency dialer

The Emergency Dialer can be entered directly from the lock screen by pressing the text "EMERGENCY DIALER".

To place an emergency call, dial the emergency number and press the green icon.

To return back to the lock screen, push the arrow in the left top corner.

## Home screen

Once the Tough Mobile is successfully booted up and the screen is unlocked, it will display the home screen. Press the APPS symbol in the middle section of the bottom of the screen to open the application grid. Press the square RECENT APPS symbol to open the list of recent applications. The

circular HOME symbol is used to return to the home screen. The triangular BACK symbol is pressed to return to the prior screen. A swipe motion to the right or left is used to navigate around the home screen.

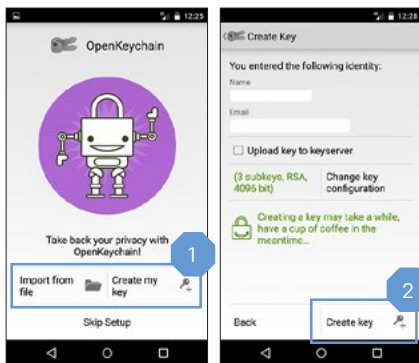

## Encrypted email

The Tough Mobile supports email encryption using OpenPGP. PGP related key management, encryption, decryption and key signing are performed using the OpenKeyChain application.

To set up the email encryption, the security keys must be created or imported for the cipher.

1. Open OpenKeyChain and create or import keys.

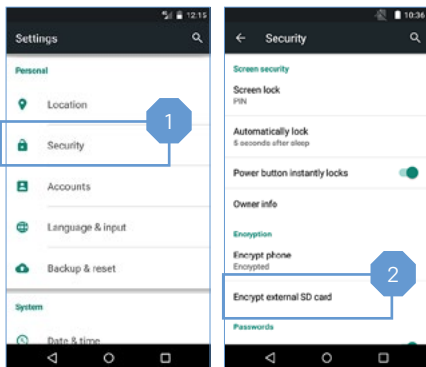

2. Select the encryption algorithm and key strength. More encryption options are available in the advanced settings.
3. A key icon in the status bar indicates the PGP is set up and ready to use.

More information about OpenKeyChain can be found at <http://www.openkeychain.org/>

## Device encryption

The Tough Mobile supports file system encryption for both the device internal flash memory and micro SD card. The internal flash memory is encrypted by default.

To enable micro SD card encryption select "Security" from the device Settings menu and Encrypt SD card from the Security settings menu. Follow the instructions provided on the Tough Mobile screen.

The Tough Mobile battery must be sufficiently charged or connected to a charger in order to proceed with the encryption set-up.

# PTT/Multipurpose key

The PTT/Multipurpose key can be configured via the Settings menu for the following features:

1. Operate the Push-to-Talk (PTT) functionality.
2. Enter sleep / Wake up the device from sleep, similar to the default Android Power key functionality.
3. Select active SIM card (SIM card 1 or SIM card 2).
4. Launch camera application.
5. Launch a defined application

## Application permission firewall

The Tough Mobile allows the user to restrict access permissions of applications to phone

data. This allows the user to control the data which applications may access.

Change the application permissions from the Security Settings menu.

## Tampering detection

The Tough Mobile is equipped with hardware tamper detection. An intrusion, other than opening the back cover, will result in a notification from the Security Wizard. The Security Wizard will notify the user the device integrity has possibly been compromised. Upon detection of a tampering event, the user data, including encryption keys, will be erased.

Tamper Detection is also triggered when the Tough Mobile battery has drained and the phone has lost all power. Once the Tough Mobile has been re-charged and powered on again, the Security Wizard will ask the user whether the phone should be shut down or the warning should be ignored.

# Important health and safety precautions information

When using this product, the safety precautions below must be taken to avoid possible legal liabilities and damages.

**DANGER** Only use the batteries, antennas, and chargers approved by The Bittium Wireless Ltd. The use of any other type may be dangerous.

**DANGER** Allow only authorized personnel to service the phone and its accessories. Unauthorized service can invalidate the warranty.

**CAUTION** The material used in the display is glass. The display can break if your handset is dropped or if it receives significant impact. Please do not use the device if the screen is broken or cracked as this may cause an injury to you.

**CAUTION** Any modification to this product is prohibited and will void warranty. The opening of the unit and use of the components for purposes not otherwise authorized by this document, including any use in airplanes or any other Aviation application, is prohibited and will void your warranty.

**CAUTION** Permanent hearing loss may occur if earphones or headphones are used at high volume for prolonged periods of time.

**CAUTION** Do not allow children to play with the Tough Mobile since it contains small parts that could become detached and create a choking hazard.

**NOTE** When using your device for prolonged periods of time, such as when you're talking on the phone, charging the battery or browsing the web, the device may become warm. In most cases, this condition is normal and therefore should not be interpreted as a problem with the device.

**NOTE** When driving, check and obey the laws and regulations on the use of mobile phones in the area where you drive. If you are going to use your phone while driving, always give full attention to driving and use a Handsfree Solution, if available. The law in many countries requires the use of a vehicle Hands-free Solution while driving.

**NOTE** Always create a backup of data you want to keep (such as contacts and calendar notes) before sending your device for service.

# Important customer information

The Tough Mobile is a wireless device, containing a radio transmitter and receiver which emit radio frequency energy during its use. Most modern electronic equipment is shielded from RF signals. However, certain electronic equipment may not be shielded against the radio signals from a wireless phone.

Do not use the Tough Mobile near medical equipment without permission. A minimum of six (6) inches should be maintained between the Tough Mobile and an implantable medical device, such as a pacemaker or implantable cardiac defibrillator in order to avoid potential interference with the medical device. Persons having implanted medical devices should follow instructions from the manufacturer of the medical device for safe use within proximity of wireless devices. Wireless phones may also interfere with some hearing aids. In the event of such interference, consult the service provider or call customer service line to discuss alternatives.

Radio signals may interfere with improperly installed or inadequately shielded electronic systems in motor vehicles. Check with the vehicle manufacturer or its representative regarding your vehicle. Aftermarket electronics which have been added to the vehicle should also be checked.

Any modification of the Tough Mobile is prohibited. Only authorized personnel should service the Tough Mobile and its accessories.

Only use software updates provided by Bittium. Accessories for the Tough Mobile should be either purchased from or approved by Bittium.

Only use the battery specified by and provided by Bittium in the Tough Mobile. Do not short-circuit the battery. Do not use the battery with a charging system which has not been approved by Bittium.

Turn the Tough Mobile OFF in any facility where posted notices so require.

To avoid interfering with blasting operations turn Tough Mobile OFF when in a blasting area or in areas posted: "Turn off two-way radio". Obey all signs and instructions.

Turn the Tough Mobile OFF when in areas with a potentially explosive atmosphere and obey all signs and instructions. Sparks in such areas could cause an explosion or fire resulting in bodily injury or even death. Areas with a potentially explosive atmosphere are often, but not always, marked clearly. Potential areas may include fueling areas (such as gas stations); below deck on boats; fuel or chemical transfer or storage facilities; vehicles using liquefied petroleum gas (such as propane or butane); areas where the air contains chemicals or particles (such as grain, dust, or metal powders); and any other area where you would normally be advised to turn off your vehicle engine.

An emergency call can be made only within a service area. For an emergency call, make sure that you are within a service area and that the device is turned on.

The device does not meet all specifications in extreme temperatures. Battery capacity (use time) is limited in low temperatures and the battery is not charged under 0°C temperatures. Device performance may be limited in high temperatures.

## Declaration of conformity

# CE 1588

Hereby, The Bittium Wireless Ltd. declares that this Tough Mobile product is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC.

A copy of the Declaration of Conformity can be found at [www.bittium.com](http://www.bittium.com)

## FCC notice to users

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures: Reorient or relocate the receiving antenna on the radio or television equipment, increase the separation between the equipment and receiver, connect the equipment into an outlet on a circuit different from that to which the receiver is connected. Consult the radio or television equipment dealer.

## Radiation exposure statement

This device complies with FCC radiation exposure limits set forth for an uncontrolled environment and meets the FCC radio frequency (RF) Exposure Guidelines in Supplement C to OET65. This transmitter must not be co-located or operated in conjunction with any other antenna or transmitter.

## Specific absorption rate (SAR) certification information

This device has been shown to be capable of compliance for localized specific absorption rate (SAR) for uncontrolled environment/general population exposure limits specified in ANSI/IEEE Std. C95.1-1992 and has been tested in accordance with the measurement procedures specified in FCC/OET Bulletin 65 Supplement C (2001) and IEEE Std. 1528-2003 Ministry of Health (Canada), Safety Code 6. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6W/kg. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations.

The highest SAR value reported under these guidelines when used at the ear is 0.79 W/kg and when correctly worn on the body is 1.06 W/kg.

## Limited warranty

For a period of 1 year from the date of purchase, Bittium Wireless Ltd. ("Bittium") warrants this Product, including all accessories provided in the sales box, against defects in materials or workmanship. If this Product is determined to be defective within the 1 year warranty period, Bittium will repair the Product or replace it with a new or refurbished Product, at its option, at no charge to the customer, except as set forth below.

This warranty does not cover cosmetic damage or damage due to misuse, abuse, negligence, accident, or modification of any part of the Product. This warranty does not cover damage due to improper operation or maintenance, connection

to improper voltage supply, or attempted repair by anyone other than a facility authorized by Bittium to service this Product.

To obtain warranty service, you must receive a Return Authorization from Bittium and ship the Product at your expense to Bittium's authorized service facility. You must ship the Product in either its original packaging or packaging affording an equal degree of protection. This warranty does not cover customer instruction, set up or set up adjustments or network coverage problems.
